SUMMARY

Full-stack software engineer with 4 years of professional experience (plus a 2022 internship) building event-driven backends, e-commerce integrations, and booking platforms for Singapore and Indonesia based companies. Works across TypeScript, Node.js, NestJS, Nuxt/Vue, React, Docker, and microservices, and has shipped AI-powered workflows to production.

EXPERIENCE

Senior Frontend Developer

PT EZB Wisata Indonesia (EZBooking/Acetours) **Aug 2025 – Present (Contract)**

- Built and maintained responsive, high-performance interfaces for a travel booking platform using Next.js, Nuxt 3, React, Vue 2/3, and Tailwind CSS.
- Translated Figma designs into pixel-accurate, reusable components and integrated them with RESTful backend APIs.
- Built shared component libraries in Vue and React that standardize UI patterns and logic across new features.
- Upheld frontend quality through structured code reviews and bug triage across modules.
- Used AI-assisted development (Claude Code) with automation and reusable patterns to speed up delivery while keeping code clean, maintainable, and aligned with engineering standards.

Backend Software Engineer

DAP Asia Pacific (S) Pte. Ltd. **May 2025 – Present (Freelance)**

- Continued backend development from Grip Principle under DAP Asia Pacific, maintaining service continuity during the company transition.
- Created integration with TikTok Shop public app, reducing integration setup time by ~40% by engineering an automated OAuth flow and webhook handler in Node.js that synced product listings and order statuses in real time.
- Improved platform reliability for a Shopify public app serving tens of thousands of active merchants achieving ~99% uptime on critical sync jobs by refactoring RabbitMQ consumers with retry logic, dead-letter queues, and structured error logging.
- Cut backend deployment time by ~50% across 3 microservices — enabling faster feature releases — by containerizing services with Docker and standardizing environment configs across staging and production.
- Scaled backend services using Node.js, MongoDB, RabbitMQ, and Docker, supporting growing order volumes.

Full-stack Software Engineer

30 PLUS GROUP PTE. LTD. (HeyPico AI) **May 2025 – Aug 2025**

- Architected and maintained backend APIs using NestJS, containerized with Docker alongside Ollama, n8n, and PostgreSQL in a unified stack.
- Built mobile automation workflows in Python, improving operational efficiency for AI-driven processes.
- Designed and maintained AI workflow pipelines using n8n, integrating LLM capabilities into production features.
- Developed responsive React frontend components and conducted peer code reviews to uphold engineering standards.
- Integrated end-to-end workflows across backend services, automation pipelines, and end devices, carrying each run from its workflow trigger to the device action.

Backend Software Engineer

Grip Principle Pte. Ltd. **Aug 2023 – May 2025**

- Delivered tested backend APIs using Node.js, MongoDB, and MySQL, supporting e-commerce operations for Shopee and Shopify merchants.
- Built microservices architecture with Docker and RabbitMQ, enabling reliable async inter-service communication across distributed systems.
- Improved document generation speed for server-side PDF/HTML reports by ~70% — enabling same-session delivery to users — by architecting a headless rendering pipeline using EJS, Puppeteer, and Browserless on containerized infrastructure.
- Increased backend test coverage and API stability across 5+ services — reducing production bug reports by ~35% — by introducing consistent API contracts, integration tests, and a shared error-handling middleware layer in Node.js and MongoDB.
- Delivered a Shopee and Shopify integration system handling thousands of daily order events — reducing manual reconciliation effort by ~60% — by building event-driven microservices in Node.js with RabbitMQ for reliable inter-service messaging.

Software Engineer Intern

AdaKerja (TrySteve Pte. Ltd.) **Jun 2022 – Nov 2022**

- Developed new features and fixed bugs in the AdaKerja mobile app using React Native, improving user-facing stability.
- Contributed to Node.js backend development, enhancing system features and stability for the job-matching platform.
- Integrated RESTful APIs with the React Native application and handled asynchronous data flows to deliver reliable mobile features.
- Troubleshot and resolved application bugs across mobile and backend services, improving application stability and reducing recurring issues during development.

EDUCATION

Universitas Atma Jaya Yogyakarta **2019 – 2023**

• 3.83/4.0 GPA • Informatics • Bachelor

- Awarded full 4-year Bidikmisi government scholarship.
- Developed a website-based attendance system as part of the final thesis, using Vue.js and Laravel.

SKILLS

Programming	**:** TypeScript, JavaScript, Python, PHP, Java, SQL.
Frontend	**:** Nuxt, Next.js, React, Vue.js, Angular, Tailwind CSS.
Backend	**:** NestJS, Node.js, Laravel, Spring Boot, Socket.io, Zod, RabbitMQ, Microservices, Firebase.
Mobile	**:** React Native, Flutter.
Database	**:** PostgreSQL, MySQL, MongoDB, Supabase, Prisma.
DevOps	**:** Docker, Kubernetes, Jenkins, CI/CD, Git, AWS, Azure, Cloudflare, Vercel, Render.
Testing	**:** Vitest, Jest, integration testing.
AI Tools	**:** Claude Code, Codex, n8n, Ollama, Windsurf, Stitch, Zep, OpenRouter.
Language	**:** English (professional working proficiency), Bahasa Indonesia (native).

PROJECTS

UpToDae - Full-stack Budgeting Platform **2026**

- Built a payday-first budgeting web app from product requirements to production using Nuxt 4, Tailwind CSS 4, NestJS, Drizzle ORM, and PostgreSQL (Supabase), deployed on Vercel and Render.
- Secured the API with Supabase Auth tokens verified by a global NestJS guard (JWKS), per-user data scoping with ownership checks, and Row Level Security that blocks direct database access.
- Designed the budgeting engine: monthly plans by income source and Needs/Wants/Savings categories, live budget-versus-spending status, budget shifts between categories, and multiple goals tracked from linked account balances.

- Added real-time in-app notifications over WebSockets for overspending, goal milestones, and payday, with once-only delivery and automatic reconnects.
- Built server-side monthly reports in Excel (ExcelJS) and PDF (PDFKit with embedded brand fonts), plus private receipt-photo uploads to Supabase Storage with signed URLs and in-browser WebP compression.
- Shipped a bilingual (Indonesian/English), responsive, SEO-optimized app with a reusable accessible component library, guided onboarding, and password reset by email.
- **Links:** Live Demo – uptodae.vercel.app · GitHub – github.com/agungmulia/uptodae

Numpak - Full-stack Car Rental Platform **2026**

- Rebuilt my 2022 university rental project (Laravel/MySQL) as a TypeScript monorepo using NestJS, Prisma, PostgreSQL (Supabase), and Nuxt 4, with Zod schemas shared between API and web and an enforced relational schema.
- Implemented role-based access for customers, drivers, and admins (JWT and backend role guards) with isolated web areas for each role.
- Built the booking engine: overlap-based availability, whole-day driver scheduling, maintenance blocks, server-side pricing with promos and delivery fees, and a 15-minute payment hold with auto-expiry.
- Added real-time notifications and customer-driver chat over Socket.io, QR payment simulation, server-generated PDF invoices, and transactional email via the Resend API.
- Shipped a bilingual (Indonesian/English), SEO-optimized web app deployed on Vercel and Render, with a one-click public demo for each role that resets daily.

Large Language Model AI Chatbot with Google Maps Integration **2025**

- Built an LLM-based chatbot interface using Ollama and OpenWebUI, integrated with Google Maps to provide location-aware conversations.
- Used for querying and guiding users based on map data.
- **Link:** Google Maps LLM Chat bot

Kartini Vocational Highschool Web Based Attendance System **2023**

- Developed using Vue 3, Tailwind, Laravel 9, and MySQL.
- Solved the manual attendance tracking process in SMK Kartini Batam, and also served as a Bachelor's thesis.
